

Your role in Risk Consulting:

- carrying out Information and security risk management
- helping clients to understand and enhance their application and infrastructure security
- performing information security reviews and alerting clients to risks
- using data analysis to save costs or enhance revenue
- supporting clients with compliance of various regulations
- helping clients mitigate the risks we alert them to.

Risk consulting – Risk analytics job duties:

You will be working to solve complex business problems through a diverse range of projects from day one. Projects vary in competency and industry sector, for example you could be:

- Building an interactive reporting dashboard for a global bank – this will enable the client to quickly assess high level business metrics but also allow them to drill down to the details which support those figures.
- Designing a data governance framework for a national retailer – this will enable the client to understand who owns which data within their organisation and how it should be managed.
- Embedding finance and fraud detection analytics into a shared service centre – this will enable the client to have greater insight into their finance processes and actively detect instances of fraud.
- Producing a predictive analytics model for an energy company – this will enable the client to take more educated decisions about the future of their business by understanding the underlying data.

Quality Requirement:

- a sharp, analytical mind
- a talent for articulating and sharing your ideas
- excellent organisational skills
- a completely unflappable approach
- the ability to see the big picture
